

Theme 1: Unconventional oil and tight gas extraction

Index No.	Paper No.	Paper Title	Authors	Affiliation
01	007	Research on a kind of deep profile control and oil displacement agent with high temperature resistant and its application in fractured tight oil reservoir	L Zhang, C Pu, L Zheng and X Gu	School of Resources and Safety Engineering, China
02	012	Gel Performance in Rheology and Profile Control under Low Frequency Vibration: Coupling Application of Physical and Chemical EOR Techniques	L Zheng, C Pu, M Liu and J Liu	China University of Petroleum, China
03	046	Sand production onset models and their laboratory validation	B Wu, X Choi and Z Chen	CSIRO, Australia
04	095	Improving diagnostic fracture injection testing for in situ stress profiling and reservoir characterization in low permeability, unconventional gas reservoirs	R Johnson	University of Queensland, Australia
05	102	Influences of fault structures on hydraulic fracturing and reservoir seal during hydraulic fracturing	F Ma, H Zhao and G Liu	Chinese Academy of Sciences, China
06	103	Characteristics of hydraulic fracturing in heterogeneous rocks under different hydraulic loading mode	H Zhao, F Ma and G Liu	Chinese Academy of Sciences, China
07	104	Influence of Perforation on Hydraulic Fracture Initiation and Propagation	T Ma, S Ma, C Tang, B Huang and A Li	Dalian University of Technology, China
08	118	Experimental Investigation on Hydraulic Conductivity of Fractures in Different Flow Regimes	Z Wang	Shandong University, China
09	122	Application of mathematical morphology to fracture analysis in borehole formation micro resistivity images	J Shen, L Wang and Z Li	China University of Petroleum, China

Theme 1: Unconventional oil and tight gas extraction

10	126	Cenozoic Strike-slip Inversion Structure of Liao zhong Depression and Its Control to Later Oil-gas Accumulation	K Yang and Y Ping	China University of Petroleum, China
11	127	Fault-related folds and their significances on hydrocarbon accumulation in Bohai bay area	Y Ping and K Yang	China University of Petroleum, China
12	137	Study on Pore Structure of Tight Sandstone Reservoir Based on New Parameter from NMR: Evidences from Chang 7 Member in Jiyuan Region, Ordos Basin, China	Q Dai, Q Luo and Y Ran	China University of Petroleum, China
13	138	Pore Structure Characteristics of Tight Sandstone Oil Reservoir and Its Logging Recognition Method: A Case Study on Upper Triassic Yanchang Formation	Q Dai, Q Luo and Y Ran	China University of Petroleum, China
14	146	Geostress Research and Application at Lucaogou Formation Tight Oil Reservoir in Jimsar Sag, Junggar Basin	J Wang, Q Luo and Y Zhao	China University of Petroleum, China
15	148	Characteristics and genetic analysis of Permian Lucaogou formation reservoir with low permeability and microfractures in Junggar basin	D Zhu, Q Luo and Y Zhao	China University of Petroleum, China
16	149	Formation mechanism of bedding fractures in the Lucaogou formation tight reservoir in Jimusar sag, Junggar basin	Y Zhang, Q Luo and C Zhang	China University of Petroleum, China
17	152	Characterization of Compact Carbonate Pore-Throat Network Systems of Xiagou Formation in Qingxi Sag, Jiuquan Basin, China	Y Zhao, Q Luo and J Wang	China University of Petroleum, China
18	154	Mineral composition prediction in the upper of Eh3 Formation in the deep sag, Biyang depression	R Huang, Z Jiang and Y Li	China University of Petroleum, China

Theme 1: Unconventional oil and tight gas extraction

19	157	Main Control Factors of Tight Oil Forming in Triassic System Oil Reservoir at Yanchang Formation of Ordos Basin	S Lu, Q Luo and Y Zhang	China University of Petroleum, China
20	159	Pore Structure Research and Application of Rate-controlled Mercury Penetration at Chang 7 Tight Oil Reservoir at Ordos Basin	X Zhu, Q Luo and P Wang	China University of Petroleum, China
21	187	The genetic mechanisms and controlling factors of natural fractures in tight oil reservoirs from the Lower Permian Lucaogou Formation, Junggar Basin, China	D Liu, Q Luo, C Zhang, W Yang, Z Li and Z Gao	China University of Petroleum, China
22	200	Pore structure characteristics and controlling factors of mud stone and shale of the 3rd section of Es3 in Zhanhua Sag	C Ning, Z Jiang and S Su	China University of Petroleum, China
23	209	Numerical Simulation for Pollutant Diffusion in Dual Porosity System with Unified Pipe Network Method	T Li, G Ma, Y Wang and F Ren	The University of Western Australia, Australia
24	217	Source-Reservoir Assemblage Types and Differential Accumulation Mechanisms in Tight Oil Reservoirs—A case study in Qingxi Sag	Q Luo, C Zhang and Y Zhang	China University of Petroleum, China
25	222	The differential evolution of buried hills in Liaodong Bay and analysis on their reservoir forming conditions	C Zhang, Q Luo and Y Zhang	China University of Petroleum, China
26	223	Distinguishing Mode of Effective Oil accumulating in Subtle Trap on the Consequent Fault-Slopes	C Zhang, Q Luo and J Wang	China University of Petroleum, China
27	229	Evaluation of frac sand permeability under high compressive stress by combining grain imaging and discrete element modelling	W Zheng and D Tannant	University of British Columbia, Canada

Theme 1: Unconventional oil and tight gas extraction

28	230	Preliminary investigation into potential geomechanical risks into oil field projects: A probabilistic analysis of Elgin-Franklin	F Pereira and D Roehl	Pontifical Catholic University of Rio de Janeiro, Brazil
29	231	A Coupled Heat Transport and Hot water flooding Model in Thin Heavy Oil Reservoir	A Hanegaonkar and GS Kumar	Indian Institute of Technology, India
30	243	Study on the Main Control Factors of Tight Oil Forming in Triassic System Oil Reservoir at Yanchang Formation of Ordos Basin	S Lu, Q Luo and Y Zhang	China University of Petroleum, China
31	253	X-Ray CT/FIB-based Microstructural Modelling of Mechanical Behaviour of Carbonates in the Oil and Gas Fields	R Abu Al-Rub	Masdar Institute of Science and Technology, UAE
32	278	Wellbore stability analysis of deviated wellbores: A case study from Australia	L Foon	Curtin University, Malaysia
