

## Theme 5: Mining

<b>Index No.</b>	<b>Paper No.</b>	<b>Paper Title</b>	<b>Authors</b>	<b>Affiliation</b>
85	003	Temperature controls on micro-crack growth dynamics with relation to chemical, fracture and mechanical properties	M Talukdar, DG Roy and T N Singh	Indian Institute of Technology Bombay, India
86	004	Deformation Characteristics and Ground Control for Highly Stressed Soft Rock Tunnels in Gently Inclined Strata	C.D. Ma, D.Y. Li and X. B. Li	School of Resources and Safety Engineering, China
87	019	Numerical analysis of stability of bleeder pillars in a retreat coal mining operation	B Mishra and X Tang	West Virginia University, USA
88	020	Experimental research on failure law of paste filling mining floor above high confined water	B Zhang, X Zhang, S Zhang, B Shen, H Wang, H Kong and CWang	Shandong University of Science and Technology, China
89	021	Time-frequency analysis of dynamic spectral precursors for rock burst based on true-triaxial experiment	W Gong, Z Meng and M He	China University of Mining & Technology, China
90	023	Numerical simulation of surface gas vent hole extraction and the effect of ventilation mode in pressure relief mining	C Zhang, S Tu and M Chen	China University of Mining & Technology, China
91	030	Development and Applications of Automatic Reset Venting Doors for Air Shafts of Coal Mines in China	Fan X, Fan S and Zhang L	China Coal Research Institute, China
92	034	Roof stability analysis of underground roadway in laminated and jointed rock mass using Discrete Element Method	SH Tu, QS Bai and FT Wang	China University of Mining and Technology, China

## Theme 5: Mining

93	037	Principles of the 110 Mining Method and Its Mining-induced Stress Distribution	M He, Z Meng and W Gong	China University of Mining and Technology, China
94	039	Study on permeability of coal containing gas under true tri-axial stress	F Xiao, F Zhang and G Liu	Heilongjiang University of Science and Technology, China
95	048	Study of pillar's reasonable width in xin'an coal mine	H Nan	Henan Polytechnic University, China
96	057	Probabilistic slope stability analysis of open pit mine using Slide 6.0	G You, N Jaggi and A Soliman	Federation University Australia
97	069	A remote monitoring warning system of landslides with a special large deformation cable and its application at the Nanfen open-pit iron mine	Z Tao, J Zhao, H Zhang and Z Hao	China University of Mining & Technology, China
98	075	Prediction of water inrush quantity from coal floor based on Gaussian process regression	S Li, P He, L Li, S Shi, F Xu, Y Zhang and J Hu	Shandong University, China
99	084	Pressure-relief mechanism of thin coal seam mining and comprehensive gas drainage technology to prevent coal and gas outburst disasters	F Wang, S Tu, C Zhang, X Geng and Y Zhang	China University of Mining and Technology, China
100	096	Hydraulic support crushed mechanism for the longwall mining of shallow seam under the roadway pillars of room and pillar mining goaf	F Wang, S Tu, C Duan, X Geng and Q Bai	China University of Mining and Technology, China
101	107	Research on Spectral Wave Characters of Rock Bursts and Orthogonal Numerical Simulation	S Wei and Y Yang	Henan Polytechnic University, China
102	110	Remote control mining technology for the high wall residual coal resources of open-pit mine	F Wang, C Zhang, X Geng and Z Zhang	University of Warwick, UK

## Theme 5: Mining

103	120	Evolving neural network using genetic algorithm for prediction of longwall mining method in thin coal seam working face	W Chen	China University of Mining and Technology, China
104	139	Mesh corrosion in underground coal mines	S Wu, M Northover, P Craig and S Saydam	University of New South Wales, Australia
105	150	Identification of foraminifera and research on sedimentary micro facies in Well ZK17503 in southern Sichuan	Y Zhang, Q Luo and S Lu	China University of Petroleum, China
106	153	Support system selection in deep and high stress underground mines - the state of the art of ground demand and support capacity	R Masoudi and M Sharifzadeh	Western Australian School of Mines, Curtin University, Australia
107	165	Application of soft computing methods for the estimation of rock mass strength parameters using drilling information	H Basarir	University of Western Australia, Australia
108	166	Indentation Anisotropy Fragmentation Mechanism of Shale under Dynamic and Static loads	G Dong, P Chen and T Ma	Southwest Petroleum University, China
109	173	A creep constitutive model for soft rocks based on the Disturbed State Concept	M Huang and C Xu	College of Civil Engineering, China
110	178	Study on the relationship between fractal crack network evolution and corresponding permeability change of rock mass during mining	T Liang, X Liu, E Wang and Q Li	Tsinghua University, China
111	180	Dynamic stability analysis of underground dams for mine water storage reservoir	Z Zheng, X Liu, D Gu and E Wang	Tsinghua University, China

## Theme 5: Mining

112	233	Control Blasting in Marble Mines-A Case Study	SC Jain and JK Patel	College of Technology and Engineering, India
113	238	Measurement of Rock Heterogeneous Properties Using Fibre Optic Technologies: A Case Study	H Gong, M Kizil and Z Chen	University of Queensland, Australia
114	242	Correlating Schmidt hammer rebound numbers with index properties of various rock types	M Khandelwal and TN Singh	Federation University Australia, Australia
115	245	Experimental investigations on the effect of boundary conditions in the Ring test	M Serati, DJ Williams and I Shraim	The University of Queensland, Australia
116	246	Ultra-high speed photography of the rupture mechanism in Brazilian test	M Serati, DJ Williams and D Lee	The University of Queensland, Australia
117	247	Qualitative assessment of the rock fall hazard at the base of high walls	K Thoeni, F Ferrari, A Giacomini and C Lambert	The University of Newcastle, Australia
118	250	Study On The Relationship Between Fractal Crack Network Evolution And Corresponding Permeability Change Of Mining Rock Mass	T Liang, X Liu and E Wang	Tsinghua University, China
119	251	Investigating the mechanism of fracture propagation on cracked chevron Brazilian discs	S Behraftar, A Scheuermann, A Liang and J Ketheeswaran	University of Queensland, Australia
120	263	The smoothed particle hydrodynamics in modelling rock fracture and caving	CT Nguyen, GD Nguyen, HH Bui, M Karakus and A Taheri	University of Adelaide, Australia
121	264	Study on the mechanism of crack coalescence under compressive loading in rock containing two pre-existing flaws	S Tang, C Tang and Z Liang	Dalian University of Technology, China
122	267	Finite element method based modelling of engineered slopes in open cast mines in India	SP Pradhan, V Vishal and TN Singh	IIT Roorkee, India

## Theme 5: Mining

123	269	Geo-disaster prediction with double-block mechanics based on Newton force measurement	M He, Z Tao and W Gong	China University of Mining and Technology Beijing, China
124	286	Roof failure mechanism and control technology for the lower coal seam extraction	Zhang S	China University of Mining and Technology, China
125	298	Analysis of Differential Evolution and Hydrocarbon Accumulation Conditions of Buried Hills in Liaodong-Bay Area	C Zhang, Q Luo and J Wang	China University of Petroleum, Beijing, China
126	309	Overburden movement and strata structure for undermining lower seam in close multiple-seam by using fully mechanized top coal caving mining	Xie S	China University of Mining and Technology, China
127	317	Methane-rich zone defined in overlying strata over goaf based on micro seismic monitoring technique	C Liu, C Tang and X Cheng	Xi'an University of Science and Technology, China
128	318	Based on Control Variable to Determinate Optimum Safety Thickness of Barrier Pillar over the Goaf and Its Application	W Li, Y Zuo, M Yu and B Li	Guizhou University, China
