

## Theme 6: Geothermal Energy

<b>Index No.</b>	<b>Paper No.</b>	<b>Paper Title</b>	<b>Authors</b>	<b>Affiliation</b>
129	005	Fracture and tensile properties of the layered crystalline rocks	TN Singh and DG Roy	Indian Institute of Technology Bombay, India
130	029	Evolution of mechanical properties of granite at high temperature and pressure and extraction of HDR geothermal energy from fault mode reservoir	YS Zhao and ZJ Feng	Taiyuan University of Technology, China
131	032	Heat-capacity measurements of sandstone at high temperatures	I Abdulagatov, ZAbdulagatova, Sn Kallaev, Z Omarov and Ranjith PG	Institute of Physics of the Dagestan Scientific Centre of the Russian Academy of Sciences, Russia
132	033	Thermal expansion coefficient measurements and density of sandstone at high temperatures	I Abdulagatov, Z Abdulagatova, S Kallaev, MR Magomedov, KAbdullaev and Ranjith PG	Institute of Physics of the Dagestan Scientific Centre of the Russian Academy of Sciences, Russia
133	049	Poroelastoplasticity in geothermal rocks	M Suarez-Arriaga	Mexican Geothermal Association, Mexico
134	062	A new method for estimating the steady state region in Thermal Response Test data	L Jensen-Page and G A Narsilio	The University of Melbourne, Australia
135	089	Energy Analysis on two ground source heat pump systems in Victoria	Q Lu, GR Aditya, GA Narsilio and I Johnston	The University of Melbourne, Australia
136	099	Full-scale instrumented shallow geothermal energy experiments in Melbourne, Australia	R Aditya, O Mikhaylova, Q Lu, G Narsilio and I Johnston	The University of Melbourne, Australia

## Theme 6: Geothermal Energy

137	100	The Effect of Joint Shear-chemical Stimulation on Enhancement in the Fractured Reservoir of Enhanced Geothermal System	J Na	Jilin University, China
138	135	Thermal Stress Effects on Structural Behaviour of Energy Piles	S You	University of Science and Technology Beijing, China
139	158	Critical temperature of permeability change in thermally cracked granite	Z Feng and Y Zhao	Taiyuan University of Technology, China
140	162	Study of effect of temperature on mechanical properties of sandstone: A Comparative Study	A Verma and P Gautam	Indian School of Mines, India
141	186	Critical factors controlling shale gas enrichment and accumulation of the Silurian Long maxi marine shale, southern China	Z Jiang and Z Li	China University of Petroleum, China
142	191	An Improved Pipe Network Model for Simulation of Fluid Flow through Discrete Fracture Networks	C Xu, C Fidelibus and P Dowd	University of Adelaide, New Zealand
143	195	Assessment of permeability enhancement distribution using micro-seismicity catalogs for an EGS stimulation	J Riffault, D Dempsey, S Karra and R Archer	University of Auckland, New Zealand
144	220	The Cam-clay constitutive model applied to the Wairakei-Tauhara geothermal field	J Pogacnik, W Koros, M Pender, J O'Sullivan, M O'Sullivan and C Bromley	University of Auckland, New Zealand
145	234	Effect of soil composition, morphology and stress state on the performance of energy piles in dense sand	A Kazzaz, I Einav, Y Gan and G Proust	The University of Sydney, Australia

## Theme 6: Geothermal Energy

146	236	Feasibility of underground seasonal storage of solar thermal energy in Finland	M Janiszewski, T Siren, L Uotinen, A Kopaly, M Honkonen, MR Yazdani, M Rinne and I Kukkonen	Aalto University, Finland
147	249	Numerical Simulation of Non-isothermal Fluid through Fracture	KM Sharma and TN Singh	IIT Bombay, India
148	258	A comparison of models for identifying fracture network models in hot dry rocks	M Leonard, C Xu, P Dowd and R Jiminez	University of Adelaide, Australia
149	260	Numerical simulation on pillar damage of the radioactive waste disposal under coupled thermal-hydraulic-mechanical conditions	C Wei, W Zhu and T Xu	North eastern University, China
150	276	Experimental study on the physical and fracture behaviour of granite specimen with a central hole after high temperature treatment under Brazilian test	S Yang and Y Huang	China University of Mining and Technology, China
151	299	An assessment of the ability of a single phase forced circulation thermosyphon and a two-phase natural convection thermosyphon to cool heated mine spoil.	P Newton, O Buzzi and S Fityus	University of Newcastle, Australia
152	303	Results of a field trial assessing the ability of a single phase thermosyphon to heat water when imbedded in a heated coal mine spoil pile	P Newton, O Buzzi and S Fityus	University of Newcastle, Australia
153	305	A new scaling approach for geothermal energy utilization using ground heat exchangers	K Altarawneh, O Buzzi, A Zaher, A Jaradat, Y Obaidat and MK Altarawneh	Yarmouk University, Irbid, Jordan
154	307	Thermal behaviour of a field scale energy pile with natural ground thermal recovery for an intermittent mode of operation	M Faizal and A Bouazza	Monash University, Australia
