

Theme 8: Analytical and numerical methods

Index No.	Paper No.	Paper Title	Authors	Affiliation
203	008	Modelling The Effect Of Contact And Seepage Forces At Equilibrium On The Failure Of Water Borehole	K Onyelowe and F Okafor	College of Engineering, Michael Okpara University of Agriculture, Nigeria
204	013	Numerical study on borehole stability by a coupled elasto-plastic damage model	J Ma, G Zhao and P Yin	Wenzhou University, China
205	015	A new failure criterion for boreholes drilled through poorly cemented sandy formations	SHashemi and N Melkoumian	School of Engineering and Technology, CQ University Australia, Australia
206	018	Application of the Rock Engineering Systems to Investigate Stope Stability	MM Khani	University of Queensland, Australia
207	022	Quantifying the effect of particle shape on the small-strain stiffness of sand	M Payan, K Senetakis, A Khoshghalb and N Khalili	University of New South Wales, Australia
208	028	Hybrid continuous-discontinuous modelling of dynamic fracture of rock under impact loads and resultant fragment arching	H Liu	University of Tasmania, Australia
209	041	Analytical method for response prediction of rock-socketed pile using different load transfer functions	Q Zhang, S Liu, S Zhang and K Wang	Shandong University, China
210	042	Modelling fluid flow through heterogeneous porous media	G Pereira and B Clennell	CSIRO, Australia
211	043	Rock burst prediction based on a cloud model without certainty degree	S Li and Y Yuan	Shandong University, China
212	053	A softening model to predict axial load in resin bolt	S Cheng, S Li, L Li and Q Zhang	Shandong University, China

Theme 8: Analytical and numerical methods

213	059	The multi-point displacement monitoring system based on granting and its application in model test	L Li, S Sun and S Li	Shandong University, China
214	068	Rockfall runout range and analysis of parameters effect on lateral dispersion	S Li and J Hu	Shandong University, China
215	076	Analysis of the response of rock-socketed pile embedded in karst area	S Li, J Zhang, Q Zhang, S Liu and P He	Shandong University, China
216	077	Rock Fracture in Cavity Expansion Test	F Molaei, A Tarokh, J Labuz and A Fakhimi	University of Minnesota, USA
217	079	Parametric Study of Joint Roughness on Fractured Rock Shear Strength Using The Discrete Element Method	Q Yu, Z Wang, T Xu and Ranjith PG	North eastern University, China
218	085	Study on mechanism of structural collapse instability in super-large section and deep buried tunnel on local nearly horizontal stratum	S Li, J Wang, W Chen, L Li, Q Zhang and Z Xu	Shandong University, China
219	088	Research on the three-phase seepage erosion coupled water inrush mechanism in completely weathered granite	Liu J, Chen W and Yang D	Chinese Academy of Sciences
220	090	Numerical analysis of tunnelling in sand using a state parameter model	B Yang, B Jones and S Utili	The University of Warwick, UK
221	091	An explicit solution for the Zhang-Zhu failure criterion	A Schwartzkopff and N Melkounian	The University of Adelaide, Australia
222	094	Numerical modelling of drill string vibration on wellbore stability	Z Chen, B Wu and X Zhang	CSIRO, Australia
223	097	Development of a unified yield-failure criterion for the modelling of hard rocks	T Bruning, M Karakus, G Nguyen and D Goodchild	The University of Adelaide

Theme 8: Analytical and numerical methods

224	098	Asymmetric hydraulic fracture mapping using the implicit level set algorithm and the extended Kalman filter	V Pandurangan and Z Chen	CSIRO, Australia
225	101	Recognition of Micro seismic Signals Based on EMD Correlation Dimension and Multi-fractal Spectrum	L Li and S Liu	Shandong University, China
226	108	A new constitutive model for the analysis of rock creep	Li S, Wang B, Zhang Q, Li L, Shi Sand Xu F	Shandong University, China
227	124	Use of risk-controlled model for predicting collapse pressure	T Ma, Q Zhang and P Chen	Southwest Petroleum University, China
228	128	Optimization of Hydraulic Fracture Parameters for Low-Permeability Condensate Reservoir	H Lin and S Zhang	China University of Petroleum, China
229	145	3D numerical investigation of damage propagation in heterogeneous quasi-brittle materials	R Pakzad, S Wang and S Sloan	University of Newcastle, Australia
230	156	Stress Wave Energy Dissipation in the Glass Bead Chain under Impact	S Jiang, L Shen, I Einav and F Guillard	The University of Sydney, Australia
231	167	Numerical prediction of the face slab deformation of a concrete face rock fill dam	B Moussai	USTHB University, Algeria
232	185	Quantitative evaluation method of micro/nano pore space in unconventional reservoir: three dimensional characterization and connectivity analysis	L Sun, X Wang, J Li, X Liu and X Jin	Research Institute of Petroleum Exploration and Development, China
233	188	A discrete element model to consider the effect of pore pressure for intact rock	G Rong, G Liu and J Chen	Wuhan University, China
234	193	Influences of fracture wall roughness on chemical reaction under coupled hydro-thermal condition	Z Wang, C Xu and PDowd	University of Adelaide, Australia

Theme 8: Analytical and numerical methods

235	202	Numerical simulations of the direct shear test using Smoothed Particle Hydrodynamics	V Lemiale, A Giwelli, P Cleary, P Gerald and B Clennell	CSIRO, Australia
236	203	Developing a stiffness deterioration technique to identify the loosened zone around underground openings	D Xu, Y Zhou and D Chen	Chinese Academy of Sciences, China
237	213	Numerical simulation and optimization for hydraulic fracturing of tight gas reservoir	Pan Z and Zhang S	CUPB, China
238	215	A Coupled Damage-Plasticity Model for Porous Rocks; Capturing Dilatant and Contractive behaviour	A Mir, V Vu, G Nguyen and A Hamid Sheikh	The University of Adelaide, Australia
239	216	Analytical solution and numerical analysis of 1D nonlinear flows model in low permeability porous media	S Li, C Liu, C Sun, Z Xu, L Li and C Gao	Shandong University, China
240	218	An Advanced Adaptive Mesh Method for Fluid Flow Simulation in Highly Discontinuous Geological Media	Y Wang, GW Ma, T Li and F Ren	The University of Western Australia, Australia
241	221	Modelling of Supercritical Gas Hydraulic Fracturing: Using the PKN Model as an Example	C Tian, Z Pan, Z Chen, Connell L and Zhang X	CSIRO, Australia
242	248	Mechanism enrichments in constitutive modelling of porous sandstones under localised failure	C Nguyen, G Nguyen, A Das and H Bui	University of Adelaide, Australia
243	252	Simulating Hydraulic Fracturing Initiation and Propagation in Rocks using a Coupled Anisotropic Elastic-Plastic-Damage Constitutive Model	R Abu Al-Rub and O Al-Ketan	Masdar Institute of Science and Technology, UAE
244	254	Fracture compressibility and its effective stress dependency derived from Walsh's logarithmic permeability model	J Shi and S Durucan	Imperial College London, UK

Theme 8: Analytical and numerical methods

245	259	A conceptual approach to mechanism based constitutive modelling of multiphase geomaterials	G Nguyen and H Bui	University of Adelaide, Australia
246	265	Modelling of Pressured Gas Migration adopting Fully-coupled Flow and Geomechanics	R Quispe and D Roehl	Tecgraf Institute, Brazil
247	270	Dynamic Strength of Deep Rocks under Initial Stresses: A Numerical Study	Z Liao, J Zhu and C Tang	The Hong Kong Polytechnic University, Hong Kong
248	271	Numerical study of rock bolt anchorage performance	Y Chen	Central South University, China
249	273	A phase-field model for mixed mode crack propagation in rock materials	X Zhang, C Vignes and S Sloan	The University of Newcastle, Australia
250	274	Constitutive modelling of sand with fines	M Rahman	University of South Australia, Australia
251	281	Explicit Integration Scheme for Sub loading Surface Plasticity Soil Models	Y Zhan	Royal Melbourne Institute of Technology, Australia
252	287	Sensitivity analysis of effects of fracture geometry on rock mass failure using synthetic rock mass approach	C Zhou, C Xu, M Karakus and J Shen	The University of Adelaide, Australia
253	293	Effect of Saturation Alteration on Wellbore Stability during WAG Injection	M Bataee, S Irawan and S Ridha	UTP, Malaysia
254	300	Micromechanical modelling of true tri-axial behaviours for hard rocks	Q Zhu, S Yuan, L Zhao and J Shao	Hohai Univesity, China
255	314	Research on Reinforcement Technology of Large Section Fragmentized Gob-side Entry with Asymmetric Damage	F Xie, F He, J Wu, G Zhang, L Zhang and W Shi	China University of Mining and Technology (Beijing), China
