

Theme 4: CO₂ sequestration technologies and nuclear waste disposal

Index No.	Paper No.	Paper Title	Authors	Affiliation
1	28	Influence of Impurity Content on the Meso-Damage of Rock Salt under Stress-Seepage Coupling Conditions	Lu Wang, Jianfeng Liu and Huining Xu	Sichuan University
2	67	Permeability Evolution and Mesoscopic Damage Characteristics During Rock Salt Failure Process	Huining Xu, Jianfeng Liu, Lu Wang and Hang Zou	Sichuan University
3	99	Permeability evolution of fracture during slipping under normal stress condition	Qiang Zhang	Institute of Rock and Soil Mechanics (IRSM), Chinese Academy of Sciences
4	104	Time-dependent cracking of Beishan granite under the effect of temperature and stress condition	Chunping Wang and Jianfeng Liu	Beijing Research Institute of Uranium Geology
5	116	Effect of coal rank on supercritical CO ₂ enhanced coalbed methane recovery: an experimental investigation	Beining Zhang, Weiguo Liang, Ranjith Pathegama Gamage, Chang Li and Dongsheng Hou	Taiyuan University of Technology
6	120	Non-isothermal modeling of gravitational instability during dissolution trapping of CO ₂ in deep saline aquifers	Mrityunjay Singh and Abhijit Chaudhuri	Indian Institutes of Technology Madras
7	124	Neutron radiography study of water imbibition in unsaturated cracked sandstone: A time-fractal model to predict the dynamic evolution of wetting front	Yixin Zhao, Yang Wu, Songbai Han, Linfeng He, Shanbin Xue and Guowei Fan	China University of Mining and Technology, Beijing
8	125	Analytical validation of CO ₂ injection-induced caprock deformation using higher order circular plate theory model	Dinesh Panneerselvam, Ranjith Pathegama Gamage, Manasa Ranjan Behera and Sreenath Vemula	IITB-Monash Research Academy
